Abstract. This article examines how globalization has reshaped national sovereignty, analyzing the implications for states' autonomy in policy-making. The research highlights the tension between global economic integration and national decision-making processes, providing insights into the challenges faced by governments in maintaining control over domestic affairs. The study uses case studies from various countries to illustrate these dynamics.

Keywords: Globalization, National Sovereignty, Economic Integration, Policy-making, State Autonomy

Introduction

Globalization has profoundly influenced the concept of national sovereignty, challenging traditional notions of state autonomy. As countries become increasingly interconnected through trade, communication, and cultural exchange, the ability of individual states to govern independently is questioned. This paper explores the multifaceted impact of globalization on national sovereignty, focusing on the balance between global economic structures and local governance. The analysis includes a review of relevant literature, empirical data, and case studies from diverse geopolitical contexts. The findings suggest that while globalization offers numerous opportunities for economic growth and cultural exchange, it also poses significant challenges to national sovereignty.
