**Abstract.** This study explores the impact of parental involvement on students' academic performance. By reviewing existing literature and conducting new surveys, the paper concludes that active parental engagement significantly enhances students' academic outcomes. The research emphasizes the need for schools to encourage parental participation in educational activities to foster student success.

**Keywords:** Parental Involvement, Academic Achievement, Education, Student Success, Family Engagement

## Introduction

Parental involvement in education has long been recognized as a critical factor influencing academic achievement. This paper investigates the various ways in which parents contribute to their children's educational success, from assisting with homework to participating in school events. By analyzing data from a range of studies and conducting new surveys, the research demonstrates that students with actively involved parents tend to perform better academically. The paper further explores how different forms of parental engagement affect student outcomes, highlighting the role of socio-economic factors. The findings advocate for schools to implement policies that encourage and facilitate greater parental involvement in the academic sphere.
