**Abstract.** This study investigates the psychological impact of urbanization on community cohesion. By examining urban areas across multiple continents, the research identifies factors that contribute to the erosion or strengthening of community bonds. The findings suggest that urbanization can lead to both increased social isolation and enhanced community networks, depending on the context. These insights are critical for urban planners and policymakers aiming to create socially sustainable communities.

**Keywords:** Urbanization, Community Cohesion, Social Isolation, Urban Planning, Psychological Impact

## Introduction

Urbanization is a global phenomenon with significant implications for social structures and community cohesion. This article explores the psychological effects of urbanization on community bonds by analyzing various urban settings worldwide. The research identifies both negative and positive impacts of urbanization on social cohesion, highlighting factors that either erode or strengthen community ties. These findings provide valuable insights for urban planners and policymakers who strive to foster socially sustainable communities amidst rapid urban growth. Understanding the psychological dimensions of urbanization is essential for building resilient and cohesive urban societies.
